## Data Flow Diagrams

A Data Flow Diagram (DFD) is a visual representation of information flows within a system. For Incident Lifecycle Automation in ServiceNow, it shows how incident data enters the system, is processed, stored, and delivered to users and support teams.

### DFD Level 0 – Incident Lifecycle Automation

| Source / Actor | ServiceNow Process | Output / Destination |
|---|---|---|
| IT User / Customer | Create incident with issue details | Incident record |
| ServiceNow | Classify incident and determine impact, urgency and priority | Prioritized incident |
| ServiceNow | Assign to appropriate support group / technician | Assigned incident |
| Support Technician | Investigate and update work notes | Investigation updates |
| ServiceNow | Monitor SLA and trigger escalation/notifications | Alerts / escalations |
| Support Technician | Record resolution | Resolution details |
| ServiceNow | Close incident and retain history | Closed incident / history |
| IT User / Customer | Receive status and resolution updates | Closure confirmation |

Flow: IT User → Incident Creation → Classification & Priority → Assignment → Investigation → SLA Monitoring / Escalation → Resolution → Closure → User Notification

## User Stories

The following user stories define the major functional requirements for the Incident Lifecycle Automation solution.

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task | Acceptance Criteria | Priority | Release |
|---|---|---|---|---|---|---|
| IT User / Customer | Incident Management | USN-1 | As an IT user, I can create an incident by providing the required issue details. | Incident is created with the submitted information. | High | Sprint-1 |
| IT User / Customer | Incident Management | USN-2 | As an IT user, I can view the status of my incident. | Current incident state and progress are visible. | High | Sprint-1 |
| Service Desk / Agent | Classification | USN-3 | As an agent, I can classify an incident using category and subcategory. | Classification is saved correctly. | High | Sprint-1 |
| Service Desk / Agent | Priority | USN-4 | As an agent, I can determine priority using impact and urgency. | Appropriate priority is assigned. | High | Sprint-1 |
| Service Desk | Assignment | USN-5 | As an agent, | Incident is | High | Sprint-1 |

| | | | | | | |
|---|---|---|---|---|---|---|
| / Agent | | | I can assign an incident to the appropriate assignment group. | routed to the correct group. | | |
| Support Technician | Investigation | USN-6 | As a technician, I can assign an incident to myself when responsible for it. | Assigned-to field shows the technician. | Medium | Sprint-1 |
| Support Technician | Investigation | USN-7 | As a technician, I can add work notes and update the incident. | Updates are saved in activity history. | High | Sprint-1 |
| ServiceNow System | SLA Monitoring | USN-8 | As the ServiceNow system, I can monitor incident SLA progress. | SLA status and elapsed time are tracked. | High | Sprint-2 |
| ServiceNow System | Escalation | USN-9 | As the ServiceNow system, I can escalate incidents when SLA or priority conditions are met. | Escalation/ notification is triggered. | High | Sprint-2 |
| IT User / Customer | Notifications | USN-10 | As an IT user, I can receive notifications about important incident updates. | Configured notifications are received. | Medium | Sprint-2 |
| Support Technician | Resolution | USN-11 | As a technician, I can record incident resolution details. | Resolution is captured before closure. | High | Sprint-2 |
| Administrator | Closure | USN-12 | As an administrator , I can ensure incidents follow the defined closure process. | Only eligible incidents are closed. | Medium | Sprint-2 |

### Key Users / Actors

- IT User / Customer – reports incidents and monitors status.
- Service Desk / Agent – classifies, prioritizes and assigns incidents.
- Support Technician – investigates, updates and resolves incidents.
- ServiceNow System – automates SLA monitoring, notifications and escalation.
- Administrator – maintains configuration and lifecycle rules.

## Expected Outcome

The DFD and user stories provide a clear view of the Incident Lifecycle Automation requirements and define the functions needed for incident creation, classification, prioritization, assignment, investigation, SLA monitoring, escalation, notification, resolution and closure.
