Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	5 September 2026
Team ID	_____
Project Name	Incident Lifecycle Automation in ServiceNow
Maximum Marks	4 Marks

Project Description

In many organizations, IT incidents are reported through emails, phone calls, or informal communication channels. This leads to poor tracking, lack of proper classification, delayed escalations, and minimal visibility into resolution progress. Without structured Incident Management, issues may remain unresolved, SLAs may be breached, and root cause tracking becomes difficult.

The objective of this project is to automate and standardize the Incident Management lifecycle using ServiceNow's Incident module.

Key Goals

- Enable Service Desk agents to create and classify incidents.
- Integrate Knowledge Management for faster resolution.
- Allow reassignment to appropriate support groups.
- Enable Level 2 technicians to investigate and resolve incidents.
- Create emergency change requests directly from incidents.
- Allow child incident creation for tracking recurring issues.
- Generate knowledge articles from resolved incidents.
- Improve SLA compliance and service visibility.

Functional Requirements

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Creation & Classification	Service Desk agent can create an incident
FR-1	Incident Creation & Classification	Agent can classify incident using category and subcategory
FR-1	Incident Creation & Classification	Incident impact, urgency and priority can be recorded
FR-2	Knowledge Management	Search knowledge articles while working on an incident
FR-2	Knowledge Management	Use relevant knowledge articles to support faster resolution
FR-3	Assignment & Reassignment	Assign incident to an appropriate support group
FR-3	Assignment & Reassignment	Reassign incident to another support group when required
FR-4	Level 2 Investigation & Resolution	Level 2 technician can investigate assigned incidents
FR-4	Level 2 Investigation & Resolution	Technician can add work notes and resolution details
FR-5	Emergency Change Request	Create an emergency change request directly from an incident
FR-6	Child Incidents	Create child incidents for recurring or related issues

FR-7	Knowledge Article Generation	Generate a knowledge article from a resolved incident
FR-8	SLA & Service Visibility	Monitor incident SLA compliance and lifecycle status
FR-8	SLA & Service Visibility	Provide visibility into incident progress and resolution

Non-functional Requirements

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The incident management process should be simple and easy for Service Desk agents and technicians to use.
NFR-2	Security	Incident information and access should be protected through appropriate ServiceNow roles and permissions.
NFR-3	Reliability	Incident records, updates, assignments and lifecycle information should be handled consistently.
NFR-4	Performance	Incident creation, retrieval, updates and related automation should operate efficiently.
NFR-5	Availability	The incident management solution should be available to authorized users when required.
NFR-6	Scalability	The solution should support increasing numbers of incidents, users and support teams.

Requirement Summary

The proposed solution standardizes the ServiceNow Incident lifecycle from incident creation through classification, knowledge-assisted investigation, assignment and reassignment, Level 2 resolution, emergency change handling, child incident tracking, knowledge article creation, and SLA monitoring. The non-functional requirements focus on usability, security, reliability, performance, availability, and scalability.
