Project Development Phase

Performance Testing – Execution & Report Submission

Date	05 September 2026
Project Name	Incident Lifecycle Automation in ServiceNow
Maximum Marks	4 Marks

1. Purpose of Document

This document summarizes performance-test coverage, workload scenarios, expected performance measures, and open performance issues for the Incident Lifecycle Automation in ServiceNow project. Scope includes incident creation and classification, reassignment, knowledge usage, Level 2 investigation and resolution, emergency change creation, child incidents, and knowledge article generation.

2. Performance Test Analysis

The report identifies performance areas to be evaluated. No executed performance measurements or load-test results were supplied; therefore, status is recorded as Not Executed rather than inventing results. Performance acceptance should use agreed response-time, throughput, concurrency, and error-rate thresholds for the target ServiceNow environment.

Performance Area	Workload	Measures	Status
Incident Creation & Classification	Create incidents and populate classification fields	Response time, throughput, error rate	Not Executed
Incident List & Search	Open/filter incident lists and search records	Page response time, concurrent-user stability	Not Executed
Assignment & Reassignment	Assign incidents to appropriate support groups	Transaction response time, errors	Not Executed
Knowledge Management	Search/attach knowledge and generate knowledge content	Search response time, transaction time	Not Executed
L2 Investigation & Resolution	Update work notes, state and resolution details	Update response time, throughput	Not Executed
Emergency Change / Child Incident	Create related change or child incident from an incident	Transaction time, error rate	Not Executed

3. Test Case Analysis

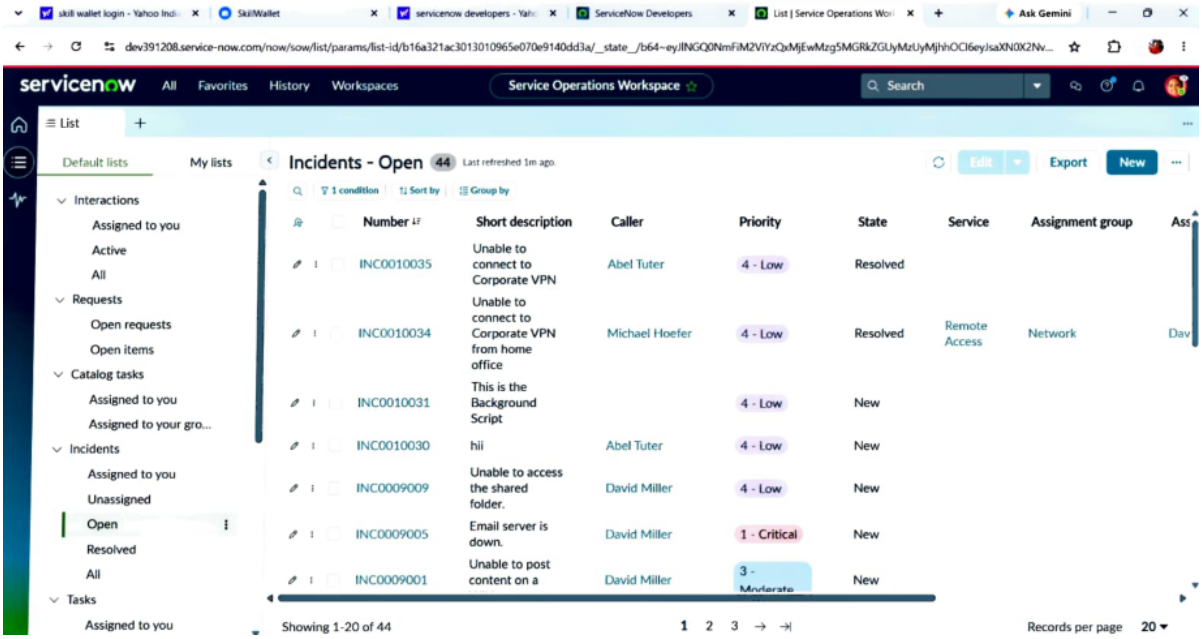

Planned test cases are listed by functional area. The supplied project material does not include a performance execution log, timings, concurrency results, or a defect register; current status is Not Tested.

Section	Total Cases	Not Tested	Fail	Pass
Incident Creation	3	3	0	0
Incident Classification & Update	2	2	0	0
Incident Assignment / Reassignment	2	2	0	0
Knowledge Search / Attach	2	2	0	0
L2 Investigation & Resolution	2	2	0	0
Emergency Change / Child Incident	2	2	0	0
Knowledge Article Generation	2	2	0	0
Total	15	15	0	0

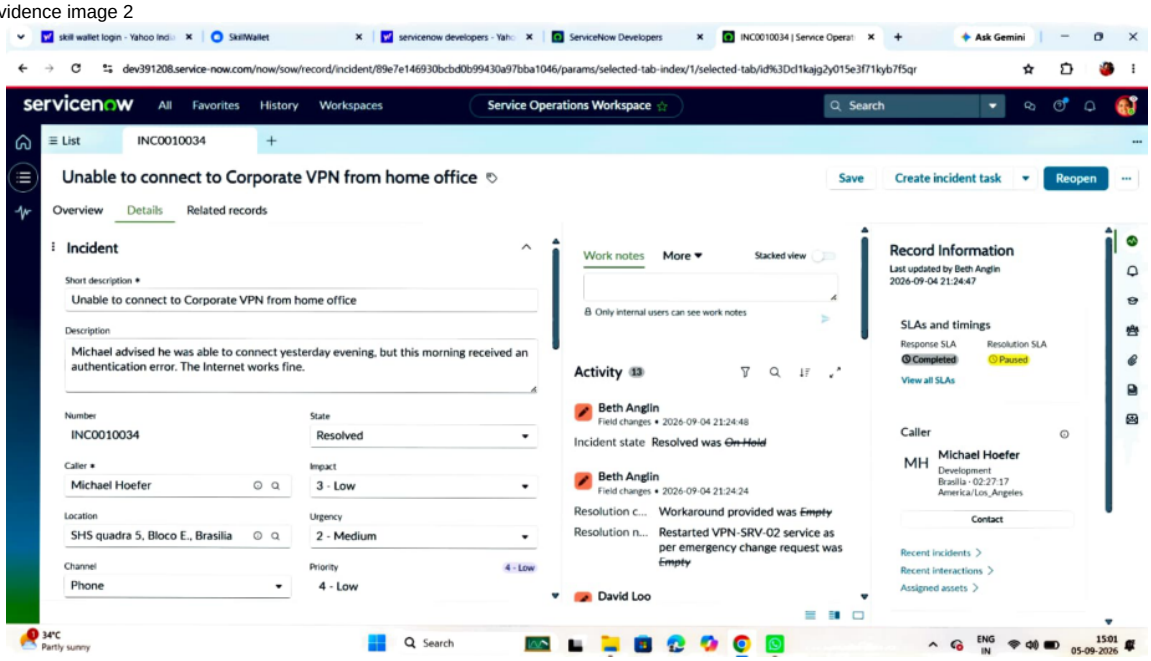

4. ServiceNow Project Evidence

Project evidence images from the supplied Incident Lifecycle Automation performance-testing document are retained. No Metro Ticket content is included.

Conclusion

The report defines the planned performance coverage and measures for the Incident Lifecycle Automation in ServiceNow project. Actual response times and load-test outcomes must be recorded after execution.
